Targeting the BEST APPLICATIONS for your Converged Infrastructure

You know the value of Converged and Hyperconverged Infrastructure
Simpler IT. Faster Outcomes. Cost Savings.

But how do you decide?

Which applications will benefit most from your Converged and Hyperconverged Infrastructure platform?

Which applications deliver the greatest benefits for your business?

Without a methodology, you're faced with choosing between:

- Hardware selection, focusing company resources at 90% of data points.
- Handling conflicts, subjective opinions from various stakeholders.

Is there an easier way?

You need to evaluate applications mapped to your business needs, but you can continue to determine the optimal balance for the business.

The Simpler, Faster Choice: Dell EMC Application Profiling Services

Leverage automated tools to accelerate analytics-based decision making for your business.

50% faster
75% fewer resources

Proven decision logic framework assesses your specific business requirements and identifies the right applications for your Converged Infrastructure.

What to map to your IT infrastructure:

- Application mapping
- Business strategy
- Usage-based revenue

Here's how:

1. Map applications to business processes
2. Determine application suitability to business processes
3. Recommended deployment architecture
